3 Particle **R** has a proton number *n* and forms a stable monoatomic ion of charge –1.

Particle **S** has a proton number of (*n*+2) and it forms a stable monoatomic ion which is isoelectronic with the ion of **R**.

Which statement is correct?

A Ion of **S** has a smaller ionic radius than ion of **R**.

B **R** has a larger atomic radius than **S**.

C Ion of **S** requires less energy than ion of **R** when an electron is removed from each particle.

D Ion of **R** releases more energy than ion of **S** when an electron is added to each particle.
