

27 Nucleophilic substitution of 3-bromo-3-ethylpentane follows an S_N1 mechanism.

The rate of reaction can be increased by using a solvent which is polar but does not form any by-products.

Which solvent should be used?

- A H_2O
- B C_6H_{14}
- C $\text{CH}_3\text{CH}_2\text{NH}_2$
- D $\text{CH}_3\text{CH}_2\text{OH}$
