

- 13** The decomposition of phosphorus pentachloride is reversible.

The rate constants of the forward and backward reactions are given as k_1 and k_{-1} respectively.

What happens to the values of k_1 , k_{-1} , K_c and the equilibrium position if an inert gas is introduced into the reaction vessel at constant temperature and pressure?

	k_1	k_{-1}	K_c	equilibrium position
A	unchanged	unchanged	unchanged	unchanged
B	increases	decreases	increases	shifts to right
C	decreases	increases	decreases	shifts to left
D	unchanged	unchanged	unchanged	shifts to right
