

- 15** Nitrogen dioxide can decompose to form nitrogen monoxide and oxygen.

When 2.50 mol of nitrogen dioxide was allowed to undergo decomposition in a 0.8 dm³ container, 0.528 mol of oxygen was present at equilibrium.

What is the numerical value of the equilibrium constant, K_c , for this reaction?

- A** 3.54 **B** 2.83 **C** 0.353 **D** 0.282
