

- 16** The position of equilibrium lies to the right in each of these reactions.

Which statement can be deduced from the information given above?

- A** The order of acid strength is $\text{HOCl} < \text{N}_2\text{H}_5^+ < \text{NH}_4^+$.
- B** N_2H_4 is the Bronsted–Lowry acid in Reaction 1.
- C** N_2H_5^+ and NH_3 are a conjugate acid–base pair in Reaction 2.
- D** N_2H_4 is a weaker base than NH_3 .

- 17** The value of $\text{p}K_{\text{a}}$ at 25 °C is 12.04.
