

- 28** Chymotrypsin is an enzyme that hydrolyses protein into smaller peptides and amino acids. It specifically hydrolyses the peptide bond on the carboxylic end of Phe.

The structure of tetrapeptide **X** and M_r of selected amino acids are given below.

tetrapeptide **X**: Val–Lys–Phe–Arg

amino acid	M_r
Val	117
Lys	146
Phe	165
Arg	174

What are the M_r of the two fragments obtained when tetrapeptide **X** is hydrolysed by chymotrypsin?

A 174 and 392
