

18 $\text{C}_2\text{H}_5\text{MgBr}$ is an example of a Grignard reagent. It behaves as if it contains the C_2H_5^- ion.

3-ethylpentan-3-ol is produced when $\text{C}_2\text{H}_5\text{MgBr}$ is added to pentan-3-one, followed by the addition of aqueous acid.

Which statement about the behaviour of C_2H_5^- ions in this reaction is correct?

- A** C_2H_5^- ions behave as electrophiles.
- B** C_2H_5^- ions behave as Arrhenius bases.
- C** C_2H_5^- ions behave as Brønsted–Lowry bases.
- D** C_2H_5^- ions behave as Lewis bases.
