

- 3 The boiling points of H_2O , H_2S and H_2Se are different. H_2S has the lowest boiling point.

Which statements are correct?

- 1 H_2S has a lower boiling point than H_2Se because H_2S molecules have weaker permanent dipole-permanent dipole forces of attraction.
- 2 H_2O molecules experience weaker temporary dipole-induced dipole forces of attraction than H_2Se molecules.
- 3 H_2O molecules experience stronger permanent dipole-permanent dipole forces of attraction than H_2S molecules.

A 1, 2 and 3 **B** 1 and 2 only **C** 2 and 3 only **D** 3 only
