

12 The statements refer to the value of the equilibrium constant, K_p , for a gas phase reaction.

Which statement is correct?

- A** Adding a catalyst increases the value of K_p for a reaction at equilibrium.
- B** Changing pressure will decrease the value of K_p for some, but not all, gas phase reactions.
- C** Doubling the pressure doubles the value of K_p for a first-order gas phase reaction.
- D** Increasing the temperature decreases the value of K_p for an exothermic reaction.
