

- 13** The gaseous reaction between nitrogen and hydrogen is carried out. At equilibrium, the temperature is 400 K and the total pressure is 100 atm.

The initial $\text{N}_2 : \text{H}_2$ mole ratio is 1 : 3 and the partial pressure of ammonia at equilibrium is 92 atm.

What is the value of the equilibrium constant, K_p , under these conditions?

- A** 0.0510 **B** 7.67 **C** 19.6 **D** 313
