

21 The hydrolysis of 3-bromo-3-methylhexane produces a mixture of two isomeric alcohols.

Which statement correctly describes this hydrolysis reaction?

- A** A carbocation is formed which is attacked by a nucleophile.
- B** A carbocation is formed which is attacked by an electrophile.
- C** A slightly positive carbon atom is attacked by a nucleophile.
- D** A slightly positive carbon atom is attacked by an electrophile.
