

22 1-chloropropane, propanoyl chloride and chlorobenzene hydrolyse in water at different rates.

Which statement is correct?

- A** Propanoyl chloride reacts less readily with water than does 1-chloropropane.
- B** The C–Cl bond is strongest in chlorobenzene.
- C** The leaving group, Cl^- , is most stable in the hydrolysis of propanoyl chloride.
- D** The carbon atom bonded to chlorine is most susceptible to electrophilic attack in propanoyl chloride.
