

- 8 A sample of silicon contains three naturally occurring isotopes, ^{28}Si , ^{29}Si and ^{30}Si .

The sample is made up of 92.23% ^{28}Si and the relative atomic mass of silicon in this sample is 28.10.

What is the percentage of the isotope ^{29}Si in the sample?

- A** 2.23% **B** 3.89% **C** 5.54% **D** 7.77%
