

- 12 Acidified potassium manganate(VII) oxidises ethanedioic acid to carbon dioxide.

25.0 cm³ of 0.01 mol dm⁻³ potassium manganate(VII) was added to 25.0 cm³ of 0.01 mol dm⁻³ ethanedioic acid.

Z is the maximum volume of CO₂ produced at s.t.p.

Which time on the graph shows the reaction occurring at the faster rate and what is the value of Z?

	faster rate	Z / cm ³
A	t_1	11.4
B	t_1	28.4
C	t_2	11.4
D	t_2	28.4
