

- 13 Hydrogen peroxide solution decomposes. The equation for this reaction is shown.

A 200 cm^3 sample of hydrogen peroxide solution is warmed. After 120 minutes, 6.00 dm^3 of oxygen gas, measured at r.t.p., is collected. Under these conditions, the reaction has a constant half-life of 40 minutes.

What is the initial concentration of the hydrogen peroxide solution?

- A 0.57 mol dm^{-3}
- B 1.4 mol dm^{-3}
- C 2.5 mol dm^{-3}
- D 2.9 mol dm^{-3}
