

- 19 When dichlorodifluoromethane, CCl_2F_2 , is released into the atmosphere, it accumulates in the upper part of the atmosphere where it reacts to form free radicals due to the action of ultraviolet light.

One of the chain reactions which can occur is shown, where $\text{X}\bullet$ represents the halogen radical.

Which statements are correct?

- 1 $\text{F}\bullet$ and $\bullet\text{CCl}_2\text{F}$ are the major free radical products made during the initiation step.
- 2 The halogen radical acts as a catalyst in the breakdown of ozone.
- 3 The halogen radical is formed during the termination step.

A 1, 2 and 3 **B** 1 only **C** 2 and 3 only **D** 2 only
