

8 Which factor contributes to MgCO_3 decomposing at a lower temperature than CaCO_3 ?

- A The charge density of the Mg^{2+} ion is higher than that of the Ca^{2+} ion.
- B The standard enthalpy change of formation of MgO is less negative than that of CaO .
- C The lattice energy of MgCO_3 is more negative than that of CaCO_3 .
- D The melting point of MgCO_3 is lower than that of CaCO_3 .
