

28 *Use of the Data Booklet is relevant to this question.*

An electrolysis cell is set up with an anode made of an alloy of 75% Cu and 25% Ni by mass and a cathode made of pure Cu. The electrolyte is 1.0 dm^3 of a solution which contains 1.0 mol of NiSO_4 and 1.0 mol of CuSO_4 .

A current of 0.50 A is passed through the cell for 1.5 hours .

What is the increase in mass of the cathode?

A 0.82 g

B 0.87 g

C 0.89 g

D 1.8 g
