

30 Rhenium is a transition element. Two properties of rhenium are given.

- 1 The melting point of rhenium is 3180°C .
- 2 The density of rhenium is $21\,020\text{ kg m}^{-3}$.

If rhenium is compared with calcium as a typical s-block metal, which properties are typical of a transition element?

- A** neither 1 nor 2
- B** 1 only
- C** 2 only
- D** both 1 and 2
