

13 Hydrogen peroxide decomposes to give water and oxygen gas.

Hydrogen peroxide can be stored at room temperature for several weeks with very little decomposition.

Which statements could explain why this is the case?

- 1 The Gibbs free energy change for the reaction at 20 °C is positive.
- 2 The reaction has a very high activation energy.
- 3 The entropy change for the reaction at 20 °C is negative.

A 1, 2 and 3 **B** 1 and 3 only **C** 2 and 3 only **D** 2 only
