

24 Propanone reacts with lithium aluminium hydride.

Propene does **not** react with lithium aluminium hydride.

Which statements are correct?

- 1 In propanone, the C=O bond has a permanent dipole which allows the carbon atom to be attacked by a nucleophile.
- 2 When propene undergoes addition reactions, it reacts with a nucleophile in the first step.
- 3 Lithium aluminium hydride reduces propanone to propanoic acid.

A 1 and 2

B 1 only

C 2 and 3

D 3 only
