

29 *Use of the Data Booklet is relevant to this question.*

The 3d orbitals of the transition metal ions shown are split into two different energy levels in their octahedral complexes.

Assume the electrons occupy **all** the 3d orbitals singly before pairing up.

Which row shows the number of electrons in the higher energy 3d orbitals when this splitting occurs?

	ion	number of electrons
A	manganese(II)	1
B	iron(III)	3
C	nickel(II)	2
D	copper(I)	0
